

# Java for FTC Workshop

Presented by FTC Team 8404 Quixilver  
<https://tinyurl.com/8404kickoff2019>

---

# About Our Team

- 6th year team
- Leland High School, Almaden
- 15 members from 8th - 12th grade
- Control Award at Champs 2019

# Agenda

1. Introduction of FTC control system (10 min)
2. Project Set Up in Android Studio (10 min)
3. Simple OpMode (15 min)
4. Execution of programs (5 min)
5. Q/A Session (10 min)

# The FTC Control System - Robot Controller

# The FTC Control System - Driver Station

# Choosing Phones

## Considerations

- Android 8.0 Oreo or higher
- 5ghz WiFi
- Fast Processor (for computer vision)

## Our Picks

1. Samsung Galaxy S5 (running LineageOS ROM) for fastest speed
2. Motorola Moto E5 for an easier purchase

## Set Up Phones

- Enable USB debugging
- Turn on airplane mode
- Connect WiFi direct

About phone

SM-G900T

## Developer options

On

Always allow Wi-Fi Roam Scans

Allow/Disallow Wi-Fi Roam Scans based on the amount of data traffic present at the interface

Mobile data always active

Always keep mobile data active, even when Wi-Fi is active (for fast network switching).

Tethering hardware acceleration

Use tethering hardware acceleration if available

Select USB Configuration

Charging

Show Bluetooth devices without names

Bluetooth devices without names (MAC addresses only) will be displayed

## ← Developer options

On

Manage root accesses  
View and control the root rules

### Debugging

Android debugging   
Enable the Android Debug Bridge (ADB) interface

Debugging notify   
Display a notification when USB or network debugging is enabled

ADB over network   
Enable TCP/IP debugging over network interfaces (Wi-Fi, USB networks). This setting is reset on reboot

Revoke USB debugging authorizations

Device hostname

# Java Demo Code

<https://pastebin.com/jkaqdWpC>

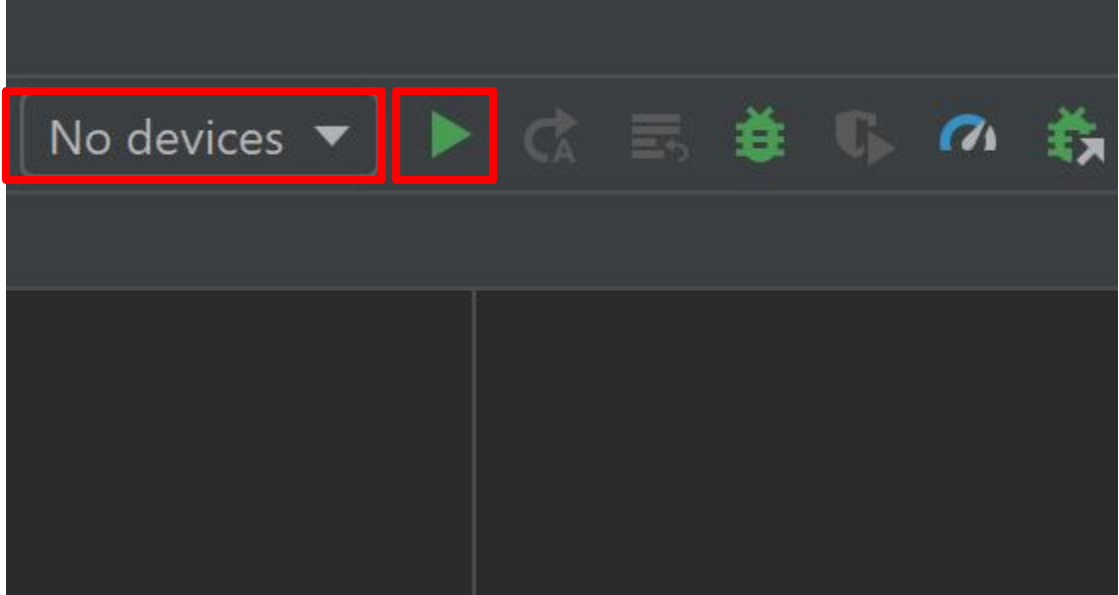

<https://pastebin.com/gWch4GsA>

## Uploading Code to the Robot Controller Phone

1. Use a USB cable to plug the phone into your computer
2. Accept the “Trust this computer” pop-up in android
3. Select the run button in Android Studio
4. Wait for Android studio to compile and transfer the code

se rotation where rotatePower is positive, we decrease leftPower  
er so the right wheel moves faster than the left wheel

```
rdPower - rotatePower;  
ardPower + rotatePower;
```

nd y values summed to be greater than 1, then one of the motor  
f the range [-1, 1]

we scale down both motor powers equally by dividing them by the  
ter motor power, so that the greater motor power is reduced  
ther power is scaled down proportionally

```
> 1) {  
s(rightPower);  
bs(rightPower);
```

```
> 1) {  
s(rightPower);  
bs(rightPower);
```
